

DIAMOND Acoustic Panel

BROAD RANGE SOUND ABSORBER

A perfect fusion of form and function, DIAMOND panels are meticulously crafted to bring you exceptional sound absorption in a broad-range frequency spectrum. They are an essential addition to any space seeking to optimize its acoustic performance.

Our dedication to superior quality is evident in the extensive research and experimentation behind the creation of these panels. The perforated design, combined with precise considerations of location, depth, and length of openings, together with an acoustic fabric at the centre, maximizes sound absorption, especially in mid-range frequencies.

Whether it's an office, home, restaurant, bar, recording studio, or home cinema, these panels are versatile and ready to enhance your acoustic environment.

Technical Information

Material:	Perforated MDF, textile and acoustic foam
Color:	White veneer, black Textile and black foam
Dimensions:	50x50 cm
Thickness:	5 cm
Weight:	1.9 kg per unit
Perforation:	30%
Installation:	Glued or hooked on walls & ceilings

Coefficient of Sound Absorption
